

# Prescription Drug Plan System

Provincial Health Department/Ministry

A Provincial Health Department/Ministry wanted to develop an electronic drug claim system that could manage claims for pharmacies and beneficiaries covered under the province's prescription drug plan in such a way as to increase the accountability of the health care system.

**xwave** developed and implemented a prescription drug plan system and has been administering it for over a decade. Services include acceptance of drug claims, maintenance of the lists of eligible benefits and recipients, adjudication of claims, funds disbursement, accessibility of electronic records, maintenance of active claims, and maintenance of licensed physicians and dentists. Over 120,000 people are registered for the program that distributes \$90 million in benefits annually.
