

CMS ASP now funding-eligible

xwave's CMS ASP is now funding-eligible under Ontario's Physician IT Program, which helps primary-care doctors adopt high-quality, integrated information technology (IT).

The CMS ASP is a Clinical Management System (CMS) that, through an Application Service Provider (ASP) format, enables subscription access to industry-leading electronic medical record (EMR) and practice management (PM) software customized for Ontario physicians. The solution was created by working with OMA e-Services Inc. (OntarioMD) and Smart Systems for Health Agency (SSHA). It incorporates GE Healthcare's award-winning Centricity® Electronic Medical Record (EMR) and Centricity® Practice Management (PM) software, providing doctors with comprehensive clinical and administrative functionality ranging from cumulative patient profiles and diagnostic decision-support tools to electronic billing and connectivity with hospitals and labs. The CMS ASP is fully implemented and supported by **xwave**, and patient information is protected in SSHA's secure, redundant data centres.

The CMS ASP was built according to a rigorous set of functional, technical and security specifications through a formal Request for Proposal. It is the only solution of its kind in Ontario to meet the prescribed eligibility requirements.
